

## Milestones, Timeline, and Effort Matrix

### Milestone List:

1. *Integrate user interface with database* - The user interface can take user-entered information and enter/save that information in the database. The user interface is also able to get information from the database and display that information in the user interface.
2. *Integrate database with AI* - The AI can use the information in the database to create or adjust the model for each user.
3. *Integrate user interface with AI* - The user interface can display what the AI views as the workout and repetitions counts.
4. *The application has all elements working together* - The application has the database, user interface, and AI working in tandem. This is not the finished application, it just is that all elements are working with one another.
5. *The application is a finished product* - The application has been tested and polished and is ready to be considered a final product.
